

TRAINING COURSE

Get ready for MediaFLO™!

Who should attend?

This training course is dedicated to TEAMCAST customers and partners who are willing to get knowledge's about **MediaFLO™ (Mobile broadcast technology developed by QUALCOMM)** and to develop expertise the usage and integration of TEAMCAST based FLO™ solution. This course is highly recommended especially for new partners or new customers as an excellent preparation **to integrate the MediaFLO™ modulator.**

Course objectives

This training course aims at providing basic theoretical and practical knowledge's required to integrate TEAMCAST modulator within DTV transmitter as well as stand alone exciter.

At first, basic understanding of the core technologies involved in MediaFLO™ system is provided.

Second of all, the course covers integration issues of the modulator: output signal characterization and measurements, linear and non-linear pre-correction adjustment, synchronization mechanisms, etc. This part shall lead the transmitter manufacturer to get the best integration of the MediaFLO™ modulator/exciter and therefore to faster launch its own product range.

Finally, the training course also gives key information to understand and to optimize the transmitter set-up and management in both MFN and SFN operating modes. The attendees will learn about how to install, set-up and to maintain TEAMCAST MediaFLO™ modulator.

Trainer

TEAMCAST training course is led by a technical expert, member of the TEAMCAST customer service. This gives the opportunity to collect rich information about **practical experience** related to TEAMCAST products and environment.

Duration

This training course usually takes place over **2 days.**

Number of attendee(s)

Not restricted. For practical reason, a maximum of 5 people is recommended.

Organization

The training session can be located at your own site or at TEAMCAST. It shall be ideally done at the transmitter manufacturer site in order to run the practice directly on the DTV transmitter.

TRAINING COURSE

Get ready for MediaFLO™!

Course content

■ 1 - MediaFLO™ basic understanding

- Initial requirements and targeted applications
- FLO™ System architecture
- FLO™ air interface overview
- FLO™ Physical Layer
- FLO™ upper layers
- FLO™ versus other technologies
- Modulator functional overview
- FLO™ Transmission modes
- SFN principles and implementation

■ 2 - TEAMCAST MediaFLO™ product range

- Modulator product range
- Gap-filler
- MediaFLO™ end-to-end system architecture (MFN & SFN)

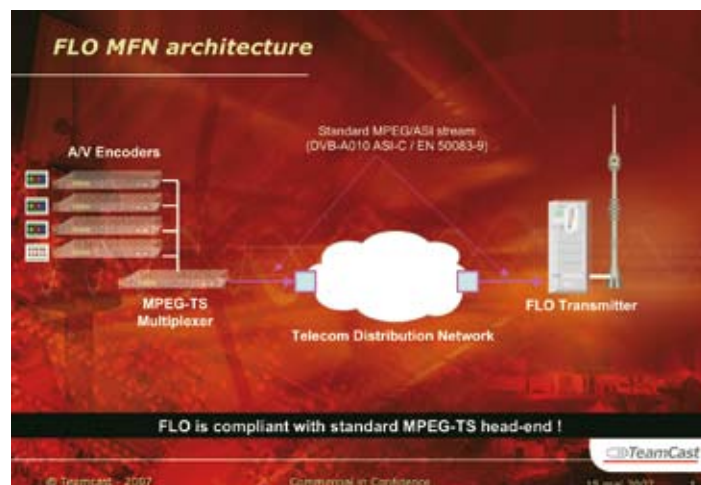

■ 3 - Modulator integration

- Output signal characterization
- FLO™ signal measurements method
- Linear and non-linear pre-correction set-up
- Synchronization issues
- Configuration for SFN operating
- Control protocol

■ 4 - 1st level of maintenance

- Modulator operating limits
- Errors and status
- Checking input and output signal
- Basic maintenance operations
- Upgrade and RMA procedures

■ 5 - Practical exercises

Prices & Conditions

■ On site training course:

- 2 day training course (unlimited number of trainees): **To be defined with TeamCast Sales department**
- Excluding travel and accommodation cost
- Price covers demo materials and training documentation

■ TEAMCAST in-house training

- A price for trainee will be quoted** for the complete 2 day session, including lunch. A minimal of two trainees shall be respected.
- Price covers demo materials, training documentation, lunch and coffee brakes.
- Participants are responsible for their own travel and accommodation costs.
