## ***New OEM Module extensions by TeamCast for optimising Mobile TV and DTV transmitter implementations***

**Rennes, 15<sup>th</sup> August 2007** - TeamCast is introducing at the IBC 2007 convention, several extensions to its successful ModulCast range of OEM modules.

These extensions provide additional flexibility and optimisation benefits for transmitter and repeater manufacturers:

- The **RXS-1000 demodulator** is a DVB-S / DVB-S2 demodulator to be used in conjunction with a DVB-T / DVB-H, FLO or DVB-SH modulator, to provide a broadcast transmitter or repeater with a satellite input feed.
- The **internal GPS receiver** option for DVB-T / DVB-H, FLO, ATSC or DVB-SH modulators allows the synchronising of the modulators, both in the time and frequency domains, for perfect transmitter synchronisation, including for the demanding "Single Frequency Network" mode of operation.

"These two extensions are ideal for our customers wishing to build optimized transmitters and repeaters, whenever a satellite feed or perfect synchronisation is a requirement", says Eric Pinson, Broadcast Product Line Manager at TeamCast. "In comparison with using additional "black boxes" offering satellite demodulation and GPS signal reception, these function extensions are definitely a most cost effective option for our customers. This is particularly valuable at a time when the network coverage extensions will require large quantities of lower power transmitters, fed by satellite, and synchronised for SFN operation".

These products will start shipping in Q4 2007.
