FOR IMMEDIATE RELEASE

2007 Results show continuing strong growth plus development in the US for TeamCast

RENNES, FRANCE, 29th January 2008 – TeamCast, the Rennes-based supplier of Digital Television Broadcast technology, has announced excellent growth of its business activities for the third year running.

TeamCast's consolidated sales' revenue has surpassed 9 million euros in 2007 (compared with 6.2 million in 2006 and 3.5 million in 2005). It is significant also that the American subsidiary of TeamCast, created in February 2007 in Chicago, has exceeded its targets, and registered a sales' revenue of more than 1 million dollars in its first year of business.

Particularly focused on the international market place, TeamCast has realised more than 50% of its sales' revenue from exports. Outside the European Community, the important markets for TeamCast have been Eastern Europe, the US and Asia – regions of the world where deployment of digital terrestrial television (DTT) and personal mobile television are accelerating.

These most encouraging results represent due compensation for the large efforts in research & development which TeamCast has invested over the last few years, and which have produced a range of products covering DTT and Mobile TV systems worldwide – notably the American and Chinese standards. These investments by TeamCast have been made with the support of public sponsorship, both national and regional, within the framework of collaborative research projects.

The workforce numbers 44 staff at the end of 2007, half of whom are R&D engineers involved in the design of products. TeamCast foresees a steady growth in personnel, in the region of a dozen employees per year, including the US subsidiary. Indeed, there are three staff vacancies waiting to be filled at this moment.

"The prospects offered by the markets for DTT and Mobile TV are excellent in terms of both worldwide and long term activities", declares Jean-Luc Pavy, CEO of TeamCast. "Our strong commitment to research and development plus our significant involvement with standardisation and collaborative projects, give us a privileged position in the market place and helps maintain our lead over our competitors."

About TeamCast:

TeamCast is a young company with strong technical credentials who supply 'OEM' product technology to infrastructure equipment providers for digital television broadcast networks.

Capitalising on the expertise of their three founders, TeamCast's scientific and technical teams have been deeply involved in the definition, development and validation of a number of digital television broadcast standards – for example, the standards for mobile and portable terminals defined by DVB-H, DVB-SH and FLO 2.0.

The OEM technology promoted by TeamCast provides a complete and compatible range of functional modules which are highly integrated and robust, and which the clients of TeamCast can easily integrate into their own transmitters, re-transmitters, base stations etc – thus forming the network infrastructure required for digital television broadcasting.

TeamCast is continuously updating its product range, developing modules which support both established and emerging standards for digital television around the world, including Europe, America and Asia. Today TeamCast serves more than 225 customers in 45 countries.

TeamCast's main research and development laboratories are based at St Grégoire, close to the city of Rennes. An American subsidiary, TeamCast Inc, based in Chicago (IL), was opened in February 2007, to enable closer working with US customers.
